

# Mayflower Autonomous Ship & The AI Captain

—  
Luc Goossens  
Technical Sales Leader Data&AI

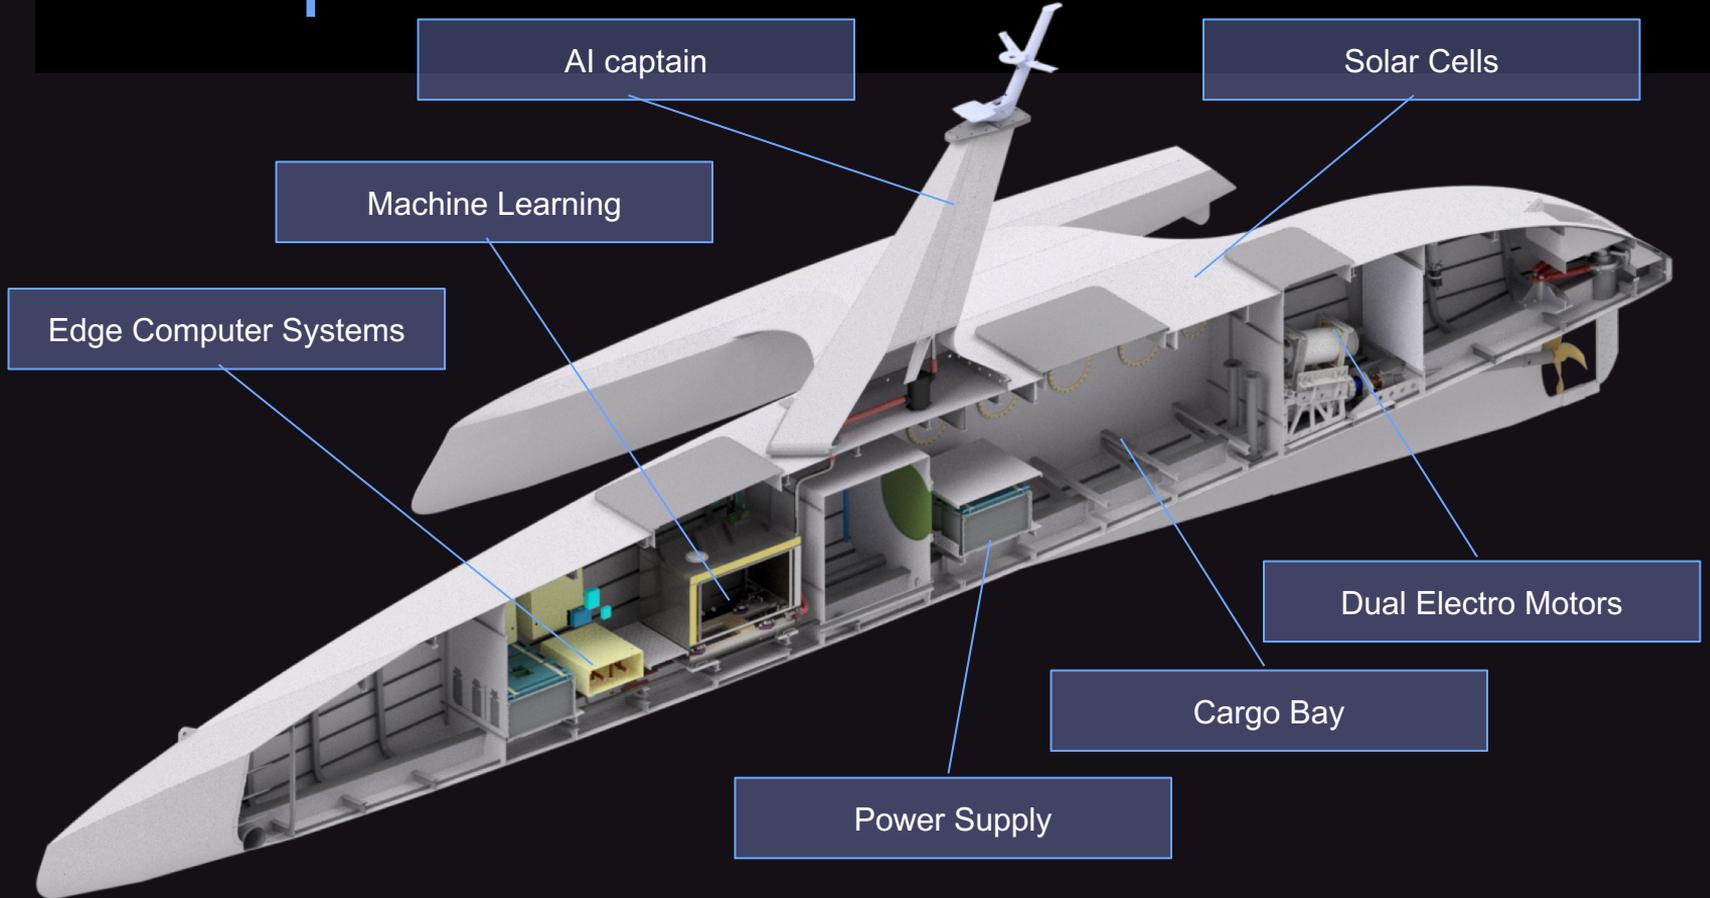

# Mayflower 1620

# Mayflower Autonomous Ship

# No space for crew needed!

# Mayflower Autonomous Ship

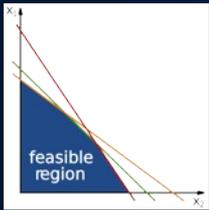

# Making decisions/AI technologies utilized :

- Deep-Learning. → 3D surroundings

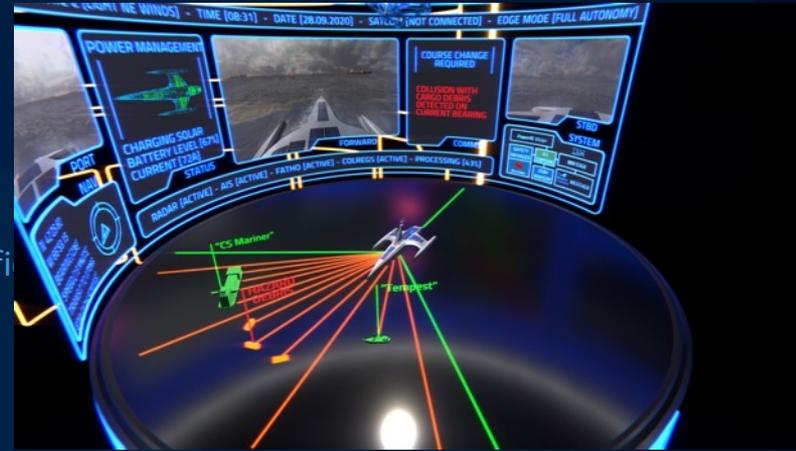

- Prescriptive logic / Inference rules → Rules at sea

- Optimization / Linear Programming →
  - Resources, goals, restrictions (!!ENERGY)

# The AI Captain

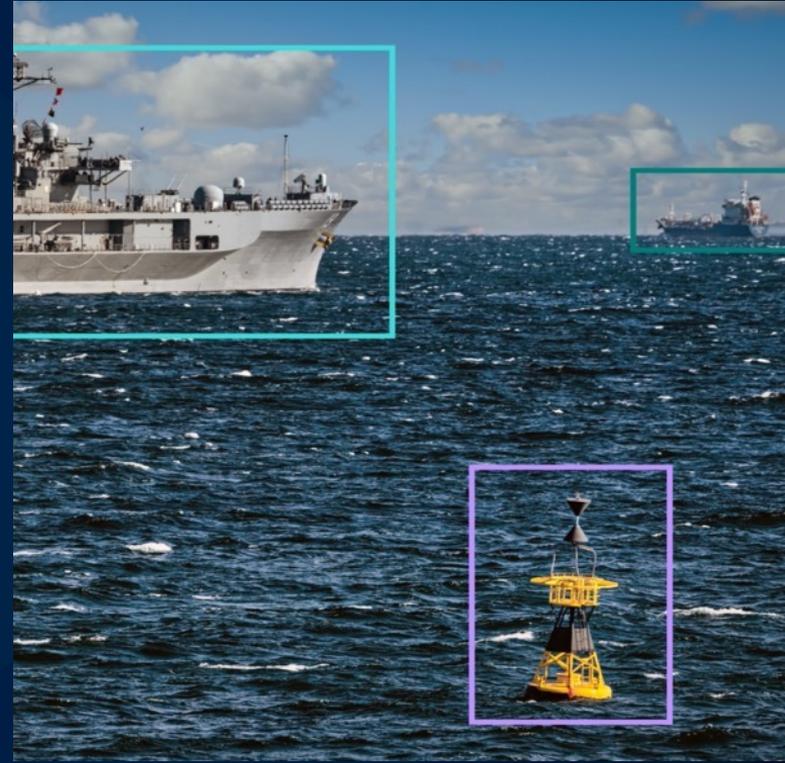

- Real Time Decisions
- Collects information on nearby vessels with an Automatic Identification System (AIS) (the “transponder”)
- Interprets radio broadcasts and weather forecasts
- Optimizes the ship’s route using visual and radar data
- Monitors atmospheric and oceanographic conditions
- **Collects all possible info from the three other AI systems**
- **Decisions based on available/needed energy!!**

# Off-The-Shelf AI systems working together

## Decisions made in an instant

- Is this image an Iceberg or a Fishing ship?
- Should I give way or stand on?
- What is the fastest route to this waypoint?
- What speed to use with the current batteries level?
- What is the safest route to destination considering weather?
- Go/No go for experiments (energy!)

# What makes Mayflower Autonomous Ship Unique

- Largest EDGE device on earth
- Interaction of different AI systems
- Transparency and explainability
- Off-the-shelf software, no R&D project
- 700 kg pay load (experiments)
- No Time Limits
- The Future?
